

TV SHOW API

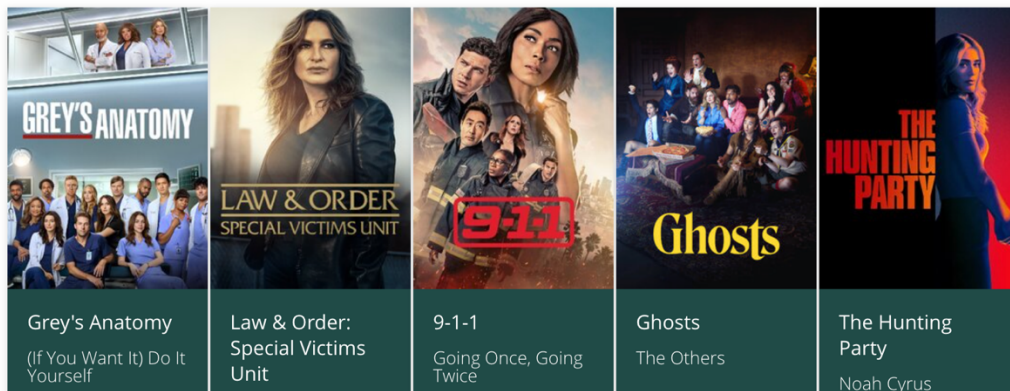

API:

World Popular TV show API

1000 request per day

Popular shows airing tonight

Schedule

About the website

Comprehensive TV Show & Schedule Data – Offers endpoints to fetch detailed info about TV shows, including metadata, episodes, seasons, cast, crew, aliases, and images.

Search Functionality – Enables fuzzy search for shows and people by name, plus lookup by external IDs (e.g., IMDB, TVDB) to help match data accurately.

Episode Scheduling – Includes schedule endpoints to retrieve airing schedules by country and date, as well as web/streaming schedules and a full future episode list.

RESTful & JSON-Based API – Provides a free, fast, REST API that returns data in JSON and follows standards like HATEOAS and HAL for easy integration.

Embedding & Related Data Links – Allows embedding of related resources (e.g., embedding episodes when fetching show details) using query parameters.

Public & Premium Options – Includes a public API free for general use and an optional user-level API for paid/premium members with extended capabilities

API Structure

Search Shows by Name

- Endpoint: `/search/shows?q=:query`
- Example: `https://api.tvmaze.com/search/shows?q=girls`
- Returns an array of shows matching the query:

Single Show Lookup

- Endpoint: `/singlesearch/shows?q=:query`
- Example: `https://api.tvmaze.com/singlesearch/shows?q=girls&embed=episodes`
- Returns detailed info of one show with embedded episodes.

Episode Schedule by Country & Date

- Endpoint: `/schedule?country=:countrycode&date=:date`
- Example: `https://api.tvmaze.com/schedule?country=US&date=2024-01-01`
- Returns a list of episodes airing on that day in that country.

Show Lookup by External ID

- Endpoint: `/lookup/shows?imdb=:id`
- Example: `https://api.tvmaze.com/lookup/shows?imdb=tt0944947`
- Returns the show details for a given IMDb ID.

People Search

- Endpoint: `/search/people?q=:query`
- Example: `https://api.tvmaze.com/search/people?q=lauren`
- Returns a list of people (actors, directors, etc.) matching the name.
