

Assignment 2

In this assignment you will practice Identity Roles to the max.

(80%):

Your task would be creating a mini reddit.

A webpage with one post and a comment section.

A guest can visit the page but cant add comments.

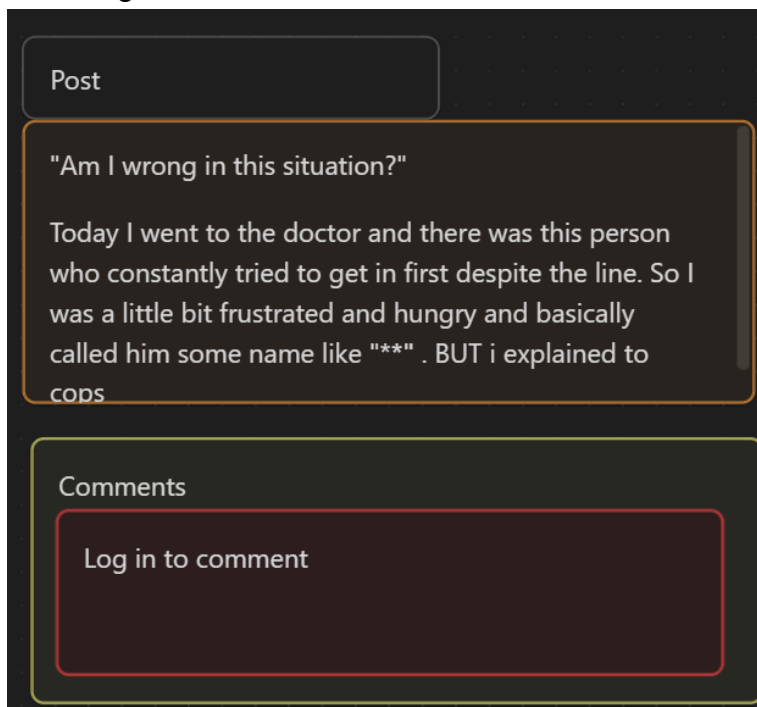

A user can make and edit a comment.

An admin can make and edit a comment, can delete other people comments and can ban users.

When a banned user tries to log in show a message that they were banned.

Here is just an example of how your example could look like:

What a guest sees:

The image shows a dark-themed user interface for a mini reddit page. At the top, there is a rounded rectangular box labeled "Post". Below it, the post content is displayed: a title in quotes, "Am I wrong in this situation?", followed by a paragraph of text: "Today I went to the doctor and there was this person who constantly tried to get in first despite the line. So I was a little bit frustrated and hungry and basically called him some name like ***" . BUT i explained to cops". Below the post, there is a rounded rectangular box labeled "Comments". Inside the "Comments" box, there is a dark rectangular area with the text "Log in to comment" in white, indicating that guests cannot add comments without logging in.

What a User and an Admin sees:

Post

"Am I wrong in this situation?"

Today I went to the doctor and there was this person who constantly tried to get in first despite the line. So I was a little bit frustrated and hungry and basically called him some name like "***" . BUT i explained to cops

Comments

User1234: "Yeah you are totally in the wrong, cant believe you said that"

Gamer101: "im dead lmao"

theAdminXX: " User67 banned for using bad words."

Comment....

With this exercise you will practice roles, different access levels. How that access level impacts the ui.

(20%)

Add one of these features:

- Like comments
- Pin a comment
- Report comment
- Search comments
- Sort by newest

Category	%	0%	Partial	Meets Expectations	Excellent
Authentication	15%	Authentication system missing or non-functional.	Registration or login works, but other required functionality (logout, validation) is missing.	Registration, login, and logout are implemented and work correctly.	Complete authentication system with proper validation and smooth user experience.

Category	%	0%	Partial	Meets Expectations	Excellent
Roles & Authorization	20%	Roles are not implemented.	Only one role implemented, or roles exist but do not affect application behavior.	Guest, User, and Admin roles are created with some role-based restrictions.	Guest, User, and Admin roles are fully implemented with correct permissions and restricted actions.
Comment System	20%	Comment system is missing or does not function.	Users can create comments, but comments are not properly connected to users/posts or displayed correctly.	Users can create and view comments. Comments are stored correctly and linked to users.	Complete comment system with proper relationships, use information displayed, and clean implementation.
Role-Based UI & Permissions	15%	UI does not change depending on user status.	Some UI changes exist, but functionality does not fully match roles.	Different UI is displayed for Guest, User, and Admin with correct available actions.	UI clearly adapts to each role with proper permissions: • Guest: Login/Register prompt • User: Create/View comments • Admin: Delete comments/manage users
Code Quality & Organization	10%	Poor organization, duplicated code, difficult to maintain.	Basic organization but inconsistent structure or unnecessary duplication.	Code is organized, readable, and follows reasonable naming conventions.	Clean architecture proper separation of concerns, reusable code, and good project structure.
Creative Extension Feature	20%	No additional feature implemented	Feature is partially implemented	One additional feature is functional	Feature is polished, fully integrated, and demonstrates

Category	%	0%	Partial	Meets Expectations	Excellent
		or feature does not work.	or has major issues.	and integrated into the application.	additional effort. Choose one: • Like comments • Pin a comment • Report comment • Search comments • Sort comments by newest
